|  | 233764 | <a href="#">Review Form JR 247 (2).docx</a> | August<br>14,<br>2023                                                                        |

**Reviewer 1 (28 Juli 2023)****FINAL RECOMMENDATION**

Please (✓) in the selection box

|                                     |                              |
|-------------------------------------|------------------------------|
| <input type="checkbox"/>            | Accepted                     |
| <input checked="" type="checkbox"/> | Accepted with Minor Revision |
| <input type="checkbox"/>            | Accepted with Major Revision |
| <input type="checkbox"/>            | Reject                       |

**Comments:**

1. Grammatical error, typographical error, and wording inconsistencies are found throughout the manuscript; English proofreading is strongly suggested.
2. Revision suggestions as written above.

## Reviewer 2 (14 Agustus 2023)

### FINAL RECOMMENDATION

Please (✓) in the selection box

|   |                              |
|---|------------------------------|
|   | Accepted                     |
|   | Accepted with Minor Revision |
| v | Accepted with Major Revision |
|   | Reject                       |

### Comments:

1. Please correct the English Grammar
2. Please add information in the introduction
3. Please give TSNA abbreviation and others word
4. Please write the aims of the study in last paragraph of introduction
5. Need improvement of manuscript

| Deskripsi      | <p><b>Methods</b></p> <p>This was an experimental study on 32 adult male Rattus norvegicus rats. They were divided into two groups exposed to nicotine-containing vapor smoke two times a day for one and three months, respectively, and one group as control. After vapor exposure, the lung tissues of the rats were taken and then subjected to histopathological examination under a microscope.</p> <p><b>Results</b></p> <p>After exposure for one month, epithelial and endothelial cells degenerated, characterized by a decrease in collagen and elastin fibers in the extracellular matrix. For three months, there were changes, the alveolar membrane had no nucleus, the surrounding endothelial cells were not visible due to damage to the extracellular matrix, the alveolar lumen had widened, causing edema in the lumen of the alveoli, and the alveoli wall was destroyed. Therefore, the connection between the alveoli was stretched.</p> <p><b>Conclusion</b></p> <p>This study found that short-term exposure to nicotine vapor causes damage to the alveoli membrane.</p> |
