Makassar, Indonesia
September 20, 2023

ORGANIZING COMMITTEE

Chairman

Aksar Roskiana Ahmad, Ph.D., Universitas Muslim Indonesia, Makassar, Indonesia.

Members

Abd. Malik, Ph.D., Universitas Muslim Indonesia, Makassar, Indonesia.

Bayu Putra, M.Sc., Universitas Muslim Indonesia, Makassar, Indonesia.

Nasrul Haq, S.Farm., Universitas Muslim Indonesia, Makassar, Indonesia.

Rizki Nur Azizah, M.Si, Universitas Muslim Indonesia, Makassar, Indonesia.

A. Muflihunna, M.Si, Universitas Muslim Indonesia, Makassar, Indonesia.

Zainal Abidin, M.Farm., Universitas Muslim Indonesia, Makassar, Indonesia.

Rusli, M.Si., Universitas Muslim Indonesia, Makassar, Indonesia.

Virsa Handayani, M.Farm., Universitas Muslim Indonesia, Makassar, Indonesia.

Andi Maulana K. Petta Lolo, M.Clin Pharm., Universitas Muslim Indonesia, Makassar, Indonesia.

Ayyub Harly Nurung, M.Sc., Universitas Muslim Indonesia, Makassar, Indonesia.

Amirullah, M.Si, Universitas Muslim Indonesia, Makassar, Indonesia.

Ririn, M.Sc, Universitas Muslim Indonesia, Makassar, Indonesia.

Aulia Wati, M.Si., Universitas Muslim Indonesia, Makassar, Indonesia.

Fitriana, M.Si., Universitas Muslim Indonesia, Makassar, Indonesia.

ABSTRACT

Non-Small Cell Lung Cancer (NSCLC) is the leading cause of cancer death with approximately 1.3 million deaths annually worldwide. Tyrosine Kinase Inhibitors (TKIs) targeting the Epidermal Growth Factor Receptor (EGFR) are used as therapy for NSCLC patients. However, patients receiving first and second generation TKIs will usually develop drug resistance within 6-12 months after treatment. Resistance occurs because of EGFR mutations that interfere with the therapeutic process. Therefore, it's necessary to detect the type of EGFR mutation before treatment by TKIs. Molecular imaging techniques such as Positron Emission Tomography (PET) and Single Photon Emission Computed Tomography (SPECT) are promising non-invasive techniques for the detection of mutation. This study aims to review articles on radiotracers that have been developed to detect common EGFR mutation such as exon 19-del and exon 21 L858R mutation in NSCLC. The method in this research is to search for articles through international database such as Scopus, Scifinder and PubMed with inclusion and exclusion parameters. The results exhibited that several radiotracers were found that were selective for EGFR 19-del and L858R. However, some compounds need to be modified structurally to have high specificity.

Keywords: Del19, L747-A750, L858R, PET, radiotracer, SPECT
